AI & MACHINE LEARNING

Small open AI models now rival last year's best systems

Cheaper models that run on ordinary hardware put useful AI within reach of smaller teams, including in Pakistan.

An independent benchmark run by university researchers finds that open-weight language models small enough to run on a single laptop now match the scores that large closed systems posted a year ago. The test covered coding, maths and reading comprehension. Running the small models costs about a tenth as much, which could let schools, startups and local governments build their own tools. The researchers caution that benchmarks reward narrow skills and that small models still make more factual errors on open-ended questions. They also found wide gaps between languages: scores in Urdu and other South Asian languages trailed English by a large margin. The team has published its test set so that others can check the results and add new languages.

THREE THINGS TO KNOW

1 Running the small open models costs about a tenth as much as the large closed systems they now match.

2 The uncapped leg-spinner took the most wickets in this year's first-class competition.

3 Developers can enable cross-document view transitions with two lines of CSS.

PAKISTAN CRICKET

Pakistan pick an uncapped leg-spinner for the home Test series

Pakistan's selectors have named a 16-player squad for next month's two home Tests, calling up an uncapped leg-spinner after a strong domestic season.

WEB DEVELOPMENT

Major browsers now support animated transitions between pages

"Simple multi-page sites can now feel as smooth as complex apps, with less code to maintain."

Every major browser now supports cross-document view transitions, a web standard that lets ordinary multi-page websites animate smoothly between pages. Developers opt in with two lines of CSS, and browsers that lack support simply load the next page as before. Early adopters report that shops and news sites feel faster, even though the pages themselves load no quicker.

CYBERSECURITY

A widely used image library fixes a critical security flaw

Maintainers of a widely used open-source image library have released a fix for a critical flaw that let a specially crafted picture run code on any server that resizes uploaded images. The bug affects millions of websites that use the library behind the scenes. Security researchers urge developers to update now, because attack code is already circulating online.

PAKISTAN TECH

Pakistan's IT exports grow as freelancers lead the rise

Pakistan's IT and IT-enabled services exports grew in the first quarter of the fiscal year, according to central bank figures, with freelancers and small software firms earning a bigger share than before. Industry groups credit faster payment channels for freelancers. They warn that slow internet speeds and frequent outages could hold back growth unless broadband capacity improves soon.

INTERNATIONAL CRICKET

A darker pink ball is approved for day-night Tests

"Ball visibility at dusk has shaped results in day-night Tests, so the change could alter how teams plan."

A darker pink ball will be used in day-night Test matches from next season, after a year of trials in domestic cricket. Batters had complained that the old ball was hard to pick up at dusk, when light fades fastest. The new ball also kept its shape and colour longer in the trials, which bowlers hope will bring back swing in the later overs.

T20 LEAGUES

T20 league teams can keep four players before the draft

Each franchise in Pakistan's top T20 league may keep only four players before next season's draft, down from eight, under new rules announced on Thursday. Organisers say the change will spread star players more evenly and make more matches competitive. Teams must name their retained players by the end of November, and the draft itself will be held in Lahore in December.

Islamabad adds 30 electric buses to its feeder routes

"Faster, cleaner feeder buses could shorten daily commutes for people living on the edge of the capital."

Islamabad will add 30 electric buses to the feeder routes that connect outer sectors and nearby towns to its metro line, city officials said. The buses are due by December and will run every 15 minutes at peak hours. Fares stay the same, and riders will be able to pay with the same card used on the metro.

GLOBAL AFFAIRS

Ministers meet early to unblock climate adaptation funding

Environment ministers from about 50 countries are meeting this weekend ahead of next month's UN climate summit, hoping to settle a long dispute over adaptation funding. Poorer countries want a clear share of climate money set aside for sea walls, drought-resistant crops and early-warning systems. Richer countries favour counting private investment toward the goal, which poorer nations call too uncertain.
